THE DJANGO

Django Fundamentals:

Django is a python web based framework.
Framework is collection of packages can be used ready made.
Can build web application.
Used in back end of dynamic website.
We can build back end of web application using python.
It uses MVT. (Model View Template)

Advantages with Django:

- It is fast
- It is secured in aspects of data
- It contains components and can be used easily

Django Hands on:

Start Django Project: django-admin startproject <<project name>>
urls file in project is used to manage a website url for hosting our project.
Running Django Project: python manage.py runserver
